What is the SAP S/4HANA Greenfield Approach?

The SAP S/4HANA greenfield approach – also known as a new implementation – is one of several options for starting your journey to SAP S/4HANA on a pristine “green field”. An SAP greenfield implementation gives you the opportunity to completely redesign your IT environment to meet the specific requirements and goals of your business.

For companies that are new on the market and therefore do not have an SAP ERP in place, this method is the way to go. But even companies that already use an SAP or non-SAP ERP system can choose an SAP greenfield implementation for their transition.

An SAP S/4HANA greenfield approach is a step-by-step process that starts with setting up your system and customizing all of your key business processes. If you choose to replace your existing ERP system, an initial data load is performed to transfer all required data from your legacy system to SAP S/4HANA.

The synergy between NTT DATA Business Solutions and Demarest Advogados was essential. As we are the first law firm to invest in this technology, a state-of-the-art platform, this has required detailed work by both us and NTT DATA Business Solutions in order to understand the peculiarities of our business and our needs.
