

What is a SAP S/4HANA Brownfield Conversion?

Brownfield Conversion means that you migrate your data from an existing SAP Business Suite system to SAP S/4HANA. Your existing ERP system (for example, SAP ECC) is upgraded to the new version of the Business Suite by performing a step by step conversion.

You receive a mix of features you've grown accustomed to and new features that can help you to improve your business. The processes can be adapted to the SAP standard and with the launch of RISE with SAP, there is also the option of switching from

an on-premise to a cloud-based SAP system in the course of a Brownfield Conversion.

This migration approach is best suited for companies that want to preserve their previous investments, customizations and adaptations.

Through our local experts and the Conversion Factory, we can offer our customers a great deal of flexibility.

“ The system will be converted 1:1 on to the new business suite, including adaptations for the modules/functions that are necessary for SAP S/4HANA adoption.
