

Cloud Migration and Transformation

ACHIEVE COST-EFFICIENT CLOUD DESIGN FOR SAP- CENTRIC WORKLOADS AND MINIMIZE BUSINESS DISRUPTION

NTT DATA Business Solutions

When digitizing their business, SAP customers seek ways to access critical data easily and reliably. Our focus lies in optimizing business applications from the cloud to the customer.

Norbert Rotter, CEO, NTT DATA Business Solutions AG

UNDERSTAND THE BEST MIGRATION AND TRANSFORMATION PATTERNS FOR YOUR SAP APPLICATIONS

Full Cloud Assessment

Businesses are increasingly moving their SAP-centric workloads from traditional hosting and in-house datacenters to the Cloud. However, many businesses lack the highly specialized planning skills needed to leverage cloud functionality at its fullest when it comes to SAP-centric workloads. Knowing where to start, how to migrate, and what options to choose can be half the battle. A full cloud assessment of your SAP landscape is an efficient way to understand the best migration and transformation patterns for your SAP applications and workloads.

Challenges

Companies are looking to move SAP applications and workloads to the cloud for a variety of reasons, but many don't know where to start. In addition, the pace of change for business and technology often makes it difficult to implement a cloud strategy with minimal disruption. But no matter the reason, insufficient planning can cause pain throughout the migration:

- **Reskilling and Upskilling In-House Resources:** enabling employees to develop cloud skills and experiences takes time and training.
- **Assessing and Prioritizing Workloads:** migration prioritization of the SAP workloads based on performance objectives (complexity, criticality, security etc.) and impacts on internal processes requires adequate planning.
- **Converting Outdated Systems and Workloads:** migrating SAP legacy workloads, system versions, integration points, and platforms to match cloud requirements is time consuming and hard to understand.
- **Managing Costs:** cloud capacity, multiple solutions and services options, billing cycles, and training employees all require additional expenditures and can become increasingly hard to manage.
- **Selecting the Right Cloud Solution:** understanding if private, public cloud or a hybrid is best for your SAP application landscape requires an in-depth analysis.

Cloud Migration and Transformation

NTT DATA Business Solutions offers a Cloud Migration and Transformation solution designed to provide your business with an understanding of the choices you'll face, education on the necessary processes required, and assurance that the cloud solution has the capability to address your current and future needs related to your SAP application landscapes. It starts with a full cloud discovery and assessment:

- **Full Cloud Assessment:** summarizes findings, considerations, and ensures the final design and planning meet your business objectives.
- **Complete and Cost-Efficient Cloud Design:** customized cloud design that assures all business and technical requirements are met.
- **Minimized Business Disruption:** efficient and customized strategies to accurately minimize disruption and cost during migration and cut-over processes.
- **Easy Transition:** once migration and cut-over are complete, easily transition to run operations.

Benefits

NTT DATA Business Solutions Cloud Migration and Transformation benefits your business in a variety of ways:

- **Full Data and System Understanding:** complete understanding of SAP-centric applications and workloads, systems, integration points, and current and future versions migrated and not migrated to the cloud.
- **Complete Cost Control:** only purchase the capacity that is needed per the assessment findings, with system sizing and billing that is known from the very beginning to avoid price surprises.
- **Improved Skills and Network:** take advantage of proven migration methodology, leverage highly skilled resources with deep SAP and cloud knowledge, and ensure that your team has the answers to important questions regarding backups, disaster recovery (DR), and high availability (HA) setups for SAP in the cloud.
- **Higher Flexibility and Efficiency:** reap all the benefits that come from a successful cloud migration, like agile applications, universal data, more flexibility, enhanced security, extended cloud platform functionalities like AI/ML, IoT using the core SAP data and more.
